

Why choose an Aerosol?

10 reasons to choose an aerosol:

1. Aerosols are efficient and easy to use
2. Aerosols are incredibly versatile; they can dispense a foam, a paste, a dry or wet spray, a gel, or a cream or powder
3. Aerosols will perform consistently from the first spray to the very last
4. Aerosols are airtight, clean and hygienic and do not leak. This also means that less preservative is needed and makes them ideal for medical and personal care products
5. In many cases, for example hair mousse, shaving gel and asthma inhalers, aerosols are by far the most effective way for a product to be used because of the way they are dispensed
6. It is possible to recycle all empty aerosols as they are made from tinned steel, aluminium or glass
7. With sleek, modern designs, aerosol looks are as good as their performance
8. Surveys show that consumers prefer the controllable spray and consistent high performance of aerosols compared with pump action products
9. The aerosol industry acts responsibly, voluntarily removing CFCs from its products in 1989, many years before required to do so by legislation
10. The aerosol industry recognises that its products impact on the environment and is continually working towards reducing the impact of aerosol products. Over the last 20 years the aerosol industry has continually reduced the amount of material used to make aerosol cans
