

# Aerosol Scientist

£38,00 - £45,000 + Benefits

## BRING YOUR DIFFERENCE

**As an Aerosol Scientist you will join hundreds of highly-skilled scientific and technical specialists at our multinational client's advanced research and development centre in the South of England.**

You will apply your expert knowledge of aerosol science to the measurement and understanding of aerosols from delivery devices and their interaction with the human respiratory system. You will support the delivery of aerosol related research strategies, bringing together internal specialists and external experts to produce leading edge science relating to the measurement, characterisation, deposition and

modelling of aerosols. In doing so you will develop and validate new methods of measuring the deposition of selected chemical components in laboratory and clinical settings, interpreting the results from deposition studies to make recommendations for future work.

This is a wide-ranging role, and you will design, plan and execute projects, write internal reports and give presentations to internal stakeholders in order to influence future research strategies. You will also write technical reports and publications for relevant scientific journals, and give poster and podium presentations at international aerosol conferences.

In return for your commitment and expertise, our client offers a generous salary and benefits package, comprehensive support for those needing to relocate to take up this position, and the opportunity to develop your career with a global business.
